Answers to Common Questions on Electromagnetic Waves

Students often seek clear, concise answers to frequently asked questions about electromagnetic waves. Here, we explore some of these questions with detailed explanations.

Q1: Why do electromagnetic waves not need a medium to travel?

Answer:

Electromagnetic waves are oscillations of electric and magnetic fields that are self-sustaining. Unlike mechanical waves, they do not require a medium (like air, water, or solid substances) to propagate because the changing electric and magnetic fields regenerate each other as the wave moves through space. This is described by Maxwell's equations, which predict that changing electric fields produce magnetic fields and vice versa, allowing the wave to sustain itself in a vacuum.
